

## Addicks & Kreye brings the module operateMybox Depot to Bremerhaven – with CONROO Integration

**Bremerhaven, 2 September 2025 – Addicks & Kreye Container Service GmbH & Co. KG, Bremerhaven, is taking the next step in digitalisation and automation: the company has signed a software licence agreement with EUROGATE IT's platform operateMybox for the module for Depot Operations.**

The agreement secures Addicks & Kreye access to a state-of-the-art cloud-based Depot solution – a proven software module that is already in successful use at REMAIN GmbH Container - Depot and Repair in Hamburg. The digital mapping and automation of central workflows have led to greater efficiency and transparency, while also opening up further optimisation potential – especially in connection with CONROO, enabling further automation and efficiency in daily depot operations.

### What the Depot Module does

The module *operateMybox Depot* is designed to digitalise and streamline the full range of container depot processes. It manages:

- **Container Handling**
- **Storage management**
- **Repair and maintenance workflows**
- **Invoicing and reporting**

All tasks are centralised in a single, cloud-based system, giving depot operators real-time visibility, smoother workflows, and seamless integration into surrounding logistics systems. The Bremerhaven rollout once again demonstrates the module's flexibility and adaptability to different customer requirements regardless of whether in the office or outside on the depot grounds with mobile devices.

### What CONROO adds

The CONROO feature extends the module *operateMybox Depot* with an intelligent pre-announcement, automated gate and yard handling solution for truck drivers. Truck arrivals are scheduled digitally, gate handlings are done autonomously, and yard positions are assigned via app reducing waiting times and congestion at the depot. For drivers, this means faster turnaround times; for operators, it ensures smoother yard capacity planning and better resource utilisation. At REMAIN GmbH Container - Depot and RepairHamburg, this combination of *operateMybox Depot* + CONROO has already shown impressive results, reducing bottlenecks and optimising daily operations.

*“With this step, we are raising the level of digitalisation and automation in our depot operations. For us, it is a key investment into the future competitiveness of our Bremerhaven site,”* says Andreas Kellner, Managing Director of Addicks & Kreye.

*“We are proud to push this project forward together with operateMybox and EUROGATE IT. With the module operateMybox Depot and the planned integration of CONROO we are setting new standards in how container depots are run,”* adds Malte Bruns, Head of Operations at Addicks & Kreye.

The licence agreement includes a one-time setup with full integration into the systems of Container Service Bremerhaven – making the solution ready for immediate use. EUROGATE IT acts as the software provider, while Addicks & Kreye will benefit from continuous updates, scalability, and integration options within the operateMybox ecosystem.

*“We are delighted to kick off this journey together with Addicks & Kreye. The Bremerhaven project is another strong example of how our operateMybox modules create immediate value in real operations – and how partnerships can accelerate the digital transformation of logistics,”* says Patrick Jandt, Head of EUROGATE IT.

### **operateMybox – a Platform for an automated terminal future**

operateMybox is EUROGATE IT’s modular platform for container logistics, offering a variety of products for terminal and depot operators – from Depot Operations to Terminal Operating Systems (TOS), Gate Operations, and Billing & Data solutions. The growing range of modules is being developed with one clear goal: to enable terminal operators and container service providers to digitalise their processes step by step, choosing exactly the modules they need. While not all modules are fully available yet, ongoing development ensures a steadily expanding portfolio. The successful deployment of the module operateMybox Depot at Addicks & Kreye, Bremerhaven marks an important milestone, demonstrating the platform’s value in real-world operations and paving the way for further rollouts in the future.
